## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-18, and 28, drawn to a system form monitoring medical conditions in a building, classified in class 340, subclass 286.07.
  - II. Claims 19-27, drawn to an adaptor for connecting a condition monitoring unit to a control unit, classified in class 439, subclass 628.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because invention I pertains to monitoring a plurality of condition monitoring units in a building. The subcombination has separate utility such as adaptor circuitry for connecting devices in a medical condition monitoring unit to a control unit of a monitoring system.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2632

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
